Abstract of DE19632899

The invention pertains to a device for dusting moving objects, including printed paper sheets (16), comprising at least one sprayer for projecting an air/powder mixture (14), devices for electrically charging the powder particles with a given polarity, as well as conveying means (22, 24) for said objects. In order to ensure powder deposit onto the paper sheets and reduce dirt accumulation inside the printer, the conveying means (24) have an electric charge of the same polarity as powder particles.
